Pune,India

Computer Science graduate with hands-on experience in full-stack development and AI-powered applications. Skilled in React.js, Next.js, Python, and FastAPI, with experience in Machine Learning, RAG, LangChain, and LangGraph to build practical, user-focused solutions.

Education

Bachelor of Engineering (B.E.), Computer Science and Engineering
SMT. Kashibai Navale College of Engineering
2022 – 2026 | Pune
CGPA: 9.01/10

Skills

Python | Java | JavaScript | SQL | HTML | CSS | React.js | Next.js | Excel (Advanced) | Power BI | Pandas | NumPy | Matplotlib | Scikit-learn | FastAPI | LangChain | LangGraph | Machine Learning | Data Structures | OOP | Git | GitHub | Docker | AWS

Experience

Freelance Web Developer
- Developed and deployed responsive websites using Next.js, JavaScript, and Tailwind CSS based on client requirements.
- Translated client requirements into user-friendly interfaces with reusable components and responsive design.
- Managed end-to-end website development, Git/GitHub version control, deployment, and custom domain configuration.

Projects

TeraQSAR – AI-Based QSAR Teratogenicity Prediction
Healthcare AI | Cheminformatics
- Developed a Quantitative Structure–Activity Relationship (QSAR) model using molecular descriptors to analyze the relationship between chemical structure and predicted pregnancy-risk categories.
- Applied a Random Forest classifier using five molecular descriptors to classify drugs into three grouped historical pregnancy-risk categories.
- Deployed a full-stack prediction platform using FastAPI and Next.js, enabling interactive molecular descriptor input and visualization of predicted categories and class probabilities.

AI Chatbot with RAG using LangGraph
Generative AI | Retrieval-Augmented Generation (RAG)
- Built a stateful AI chatbot using LangGraph for multi-step conversational workflows
- Implemented Retrieval-Augmented Generation (RAG) for document-based question answering using embeddings and similarity search
- Enabled real-time streaming responses with thread-based conversation support for resuming past chats
- Integrated SQLite for persistent storage of chat history and session data

FraudGuard – AI-Powered Fraud Detection System
Banking & Financial Technology | AI/ML
- Developed a machine learning-based fraud detection system using Random Forest with 80% accuracy
- Performed data preprocessing, feature engineering, and model evaluation on transaction data
- Built a FastAPI backend to serve real-time fraud predictions from the trained ML model
- Developed a Next.js frontend for transaction analysis with fraud probability and risk-level classification

Certification

Data Structures & Algorithms
Arrays, linked lists, stacks, trees, sorting, and searching

Python Programming Fundamentals
IIT Kharagpur

Data Science Certification
Python, statistics, machine learning, and data visualization

Achievements

Hackathon Winner | Speed Up Infotech
Secured 1st Rank for developing an AI-powered fraud detection system using Machine Learning.

Team Leadership Recognition | Winzera Private Limited
Recognized as Team Leader for contributing to the organization and execution of a Health Awareness Campaign.
