Pune,India

Computer Science graduate with hands-on experience in Machine Learning, Data Science, and AI powered applications. Skilled in Python, RAG, and LangGraph, with a strong passion for solving real-world problems using AI and data-driven technologies.

Education

Bachelor of Engineering (B.E.), Computer Science and Engineering

SMT. Kashibai Navale College of Engineering

2022 – 2026 | Pune

CGPA: 9.01/10

Skills

Python | Java | SQL | Excel (Advanced) | Power BI | Pandas | NumPy | Matplotlib | Scikit-learn | FastAPI | LangChain | LangGraph | Machine Learning | Data Structures | OOP | Git | GitHub | Docker | AWS

Experience

Software Development Intern | Rego Digital Solutions

06/2026 – 08/2026

- Built responsive web pages using Next.js and modern frontend technologies.
- Created reusable UI components and developed client-specific features based on project requirements.
- Implemented website navigation, page layouts, and interactive frontend features.

Projects

FraudGuard – AI-Powered Fraud Detection System

Banking & Financial Technology | AI/ML

- Developed a machine learning-based fraud detection system using Random Forest with 80% accuracy
- Performed data preprocessing, feature engineering, and model evaluation on transaction data
- Built a FastAPI backend to serve real-time fraud predictions from the trained ML model
- Developed a Next.js frontend for transaction analysis with fraud probability and risk-level classification

AI Chatbot with RAG using LangGraph

Generative AI | Retrieval-Augmented Generation (RAG)

- Built a stateful AI chatbot using LangGraph for multi-step conversational workflows
- Implemented Retrieval-Augmented Generation (RAG) for document-based question answering using embeddings and similarity search
- Enabled real-time streaming responses with thread-based conversation support for resuming past chats
- Integrated SQLite for persistent storage of chat history and session data

TeraQSAR – AI-Based QSAR Teratogenicity Prediction

Healthcare AI | Cheminformatics

- Developed a Quantitative Structure–Activity Relationship (QSAR) model using molecular descriptors to analyze the relationship between chemical structure and predicted pregnancy-risk categories.
- Applied a Random Forest classifier using five molecular descriptors to classify drugs into three grouped historical pregnancy-risk categories.
- Deployed a full-stack prediction platform using FastAPI and Next.js, enabling interactive molecular descriptor input and visualization of predicted categories and class probabilities.

Certification

Data Structures & Algorithms

Arrays, linked lists, stacks, trees, sorting, and searching

Python Programming Fundamentals

IIT Kharagpur

Data Science Certification

Python, statistics, machine learning, and data visualization

Achievements

Hackathon Winner | Speed Up Infotech

Secured 1st Rank for developing an AI-powered fraud detection system using Machine Learning.
